IMPORTER OF

## German Flower Seeds

1824 FOSTER AVENUE  
CHICAGO, ILL.

PETUNIA

---

# PREFACE

---

## TO MY ESTEEMED CUTO SMERS

In the past I had the good fortune to be entrusted with your esteemed orders. For this confidence I owe you many thanks. It shall be my endeavor at all times to supply you with the best seeds only from the European market, seeds of the latest harvest and to reasonable prices.

With a number of the seeds it is not always possible to deliver them at a definite date because the crop of these seeds depends much on the weather conditions, with which the seed-growers have to contend. In such cases I must beg for a little leniency until the arrival of the new seed enables me to fill your orders. On principle I do not sell seeds the germinating ability of which is nearly exhausted thus assuring you shipments of seeds which will bring you results.

Terms of delivery are as follows: Cash with order or C. O. D. up to the amount of \$50.00. An account will be opened for orders of larger amounts, the bills being payable the 1st of the following month.

Seeds, not indicated in the catalogue, will be ordered for you, if desired, direct in Europe. The time for delivery will be about 8-10 weeks.

All price quotations in this catalogue will be void with the issue of a new catalogue.

Yours sincerely,

HERMANN GLIEME.

## **LATEST NOVELTIES**

I wish to call your special attention to the latest novelties of flowers which have appeared on the market.

### **Antirrhinum (Snapdragon)**

The latest kind of Antirrhinum is the Tom Thumb, which is a first class pot plant. Its height is about 10 inches, and it is forming a compact globular bush with dark green leaves. For other varieties see page 4.

### **Begonia Hybrida Pendula**

This Begonia with its mixture of many colors is an excellent flower for hanging baskets. For other kinds see page 6-8.

### **Calendula**

The Orangeball is today the best cut flower on the German market. For other varieties see page 7.

### **Zinnia elegans fl. pl. Gaillardia**

As the name of the flower indicates the tone of its colors is like that of the Gaillardia. No Zinnia of such a color was on the market before. For other kinds see page 24.

CALCEOLARIA HYBRIDA GRANDIFLORA

# LIST OF SEEDS

(For Perennials see page ..)

## ABUTILON

Will blossom at any time of the year under glass and out of doors during summer and autumn.

Trade Package \$1.00

## CINERARIA

The **Cineraria Multiflora Nana** is for marketing purposes a plant of the highest standing. The blossoms, being of a height of about 1 inch, sumount in large dense umbels umbrella like the delicate foliage underneath. This build of the flower is an advantage, which should not be underestimated because the plant claims during the winter-time considerably less space than plants with a widely spreading growth.

The plant is not affected by putrification of some of its leaves nor by damage done by snails because these leaves are replaced by new shoots without deforming the plant. This Cineraria reaching a height of about 10 inches can be considered the best pot-plant and the most beautiful flower for marketing and decoration purposes.

A crop of the flower may already be secured at Christmas if sown early enough, but its most perfect development and beauty the plant will display during the season of March to May.

# PANSIES

## GIANT TRIUMPH

These new plants distinguish themselves by a strong growth forming compact bushes of round shape and conspicuous large foliage. Upon strong stems the five spotted flowers of a completely round form elevate themselves above the foliage with an erect posture in a graceful manner. The extremely broad leaves cover themselves in a manner giving the flower almost the appearance of being twofold. The margin of the leaves of the most of the flowers is neatly curled without injuring the erect posture of the flower.

The magnificence, the luster and the richness of the colors is very conspicuous, caused by the unique and very rare dark red and brown tone of colors. Upon each leaf of the flower appears prominently the large extremely effectual dark colored spot which is oftentimes surrounded by a conspicuously glowing variously colored border.

All prominent experts in the flower growing business of all countries declare this flower to be the result of the most unique and un-  
 attained of flowers.

## EXPOSITION PHANTASY HIMALAYA

Receiving the highest award. They are carrying off the world's record prizes. The highest award and the crown for ceaseless labor and experiments has produced these winter-flowering and sweet-smelling **Ice Pansies**.

The first flowering sets in at the beginning of October, keeps right on during the whole of the Fall until it snows, but they keep on flowering and blossoming under cover of the snow, and just as soon as Spring melts the ice and the snow and the rays of the sun shine upon them, they again unfold their glorious blossoms as if nothing had happened. The early and late, the almost continually blooming Giant World's Pansies certainly give the world an almost continuously flowering and charming ground cover, combining a late Fall as well as an early Spring covering.

# THE CULTURE

...OF...

## PRIMULA OBCONICA

The PRIMULA OBCONICA must be sowed out between January and May, depending when to expect blooming, either in fall, winter or spring. It must be sowed in old, medium rich soil, mixed with sand. Do not use any leaf mold or Peat, for it contains Tannic acid, which will kill the seedlings. The seed must not be covered. The boxes should be kept dark for 8 to 10 days at a temperature of 60° F during the night. After this the boxes should be removed to a warmer place and be covered with glass plates. Until the germination occurs, which is about 3 weeks after the sowing, the boxes should be kept in a temperature of about 65° F. To obtain a good germination the soil should be kept moist and should be protected against sunlight. The soil should never dry out. **for there might not be any chance to have success in germination.** If the seeds are treated correctly, the germination should be as high as 90 to 95 %.

The little seedlings must be replanted after the germination. This time the soil can be somewhat richer.

In the summer the plants can be kept in potts or in beds. As the plants grow bigger the soil can be richer and should contain some clay. Uniform shadow, plenty of air and moist is needed for a good growing of the plants.

Early in the summer growing budstems should be picked out. As they will grow again, it is up to the grower to have the plants blooming any time he likes to.

### HERMANN GLIEME

### IMPORTER OF GERMAN FLOWER SEEDS

1824 FOSTER AVE., CHICAGO, ILL.

# Specialty of Berlin

Primula obconica / Berliner Hodzucht

Gartenbaubetrieb Ad. Grille, Berlin-Weißensee
